

# Web-X DRM

Prevent web scraping of text, images, audio, and video in web services.

With Web-X DRM, web service providers can rest easy, confident against content leaks from scraping.

Our robust steganography and information hiding technology shields HTML documents from any web scraping attacks.

- No client-side installation required
- No server-side integration needed

## Key functions of Web-X DRM

### Text Obfuscation

By utilizing steganography obfuscation technology, it prevents scrapers from accessing the original content.

### Resource URL Hiding

By concealing the source URL in media tags, it ensures that crawlers cannot access the resources.

### Resource Encryption

By encrypting media resources using the AES encryption algorithm, it renders accessed resources useless to unauthorized users.

### Watermarking

Through visible watermarking and usage tracking, it safeguards against unauthorized capture and distribution.

## Web-X DRM Browser controls

Developer tools control

Print control

Save-as control

Copy & paste control

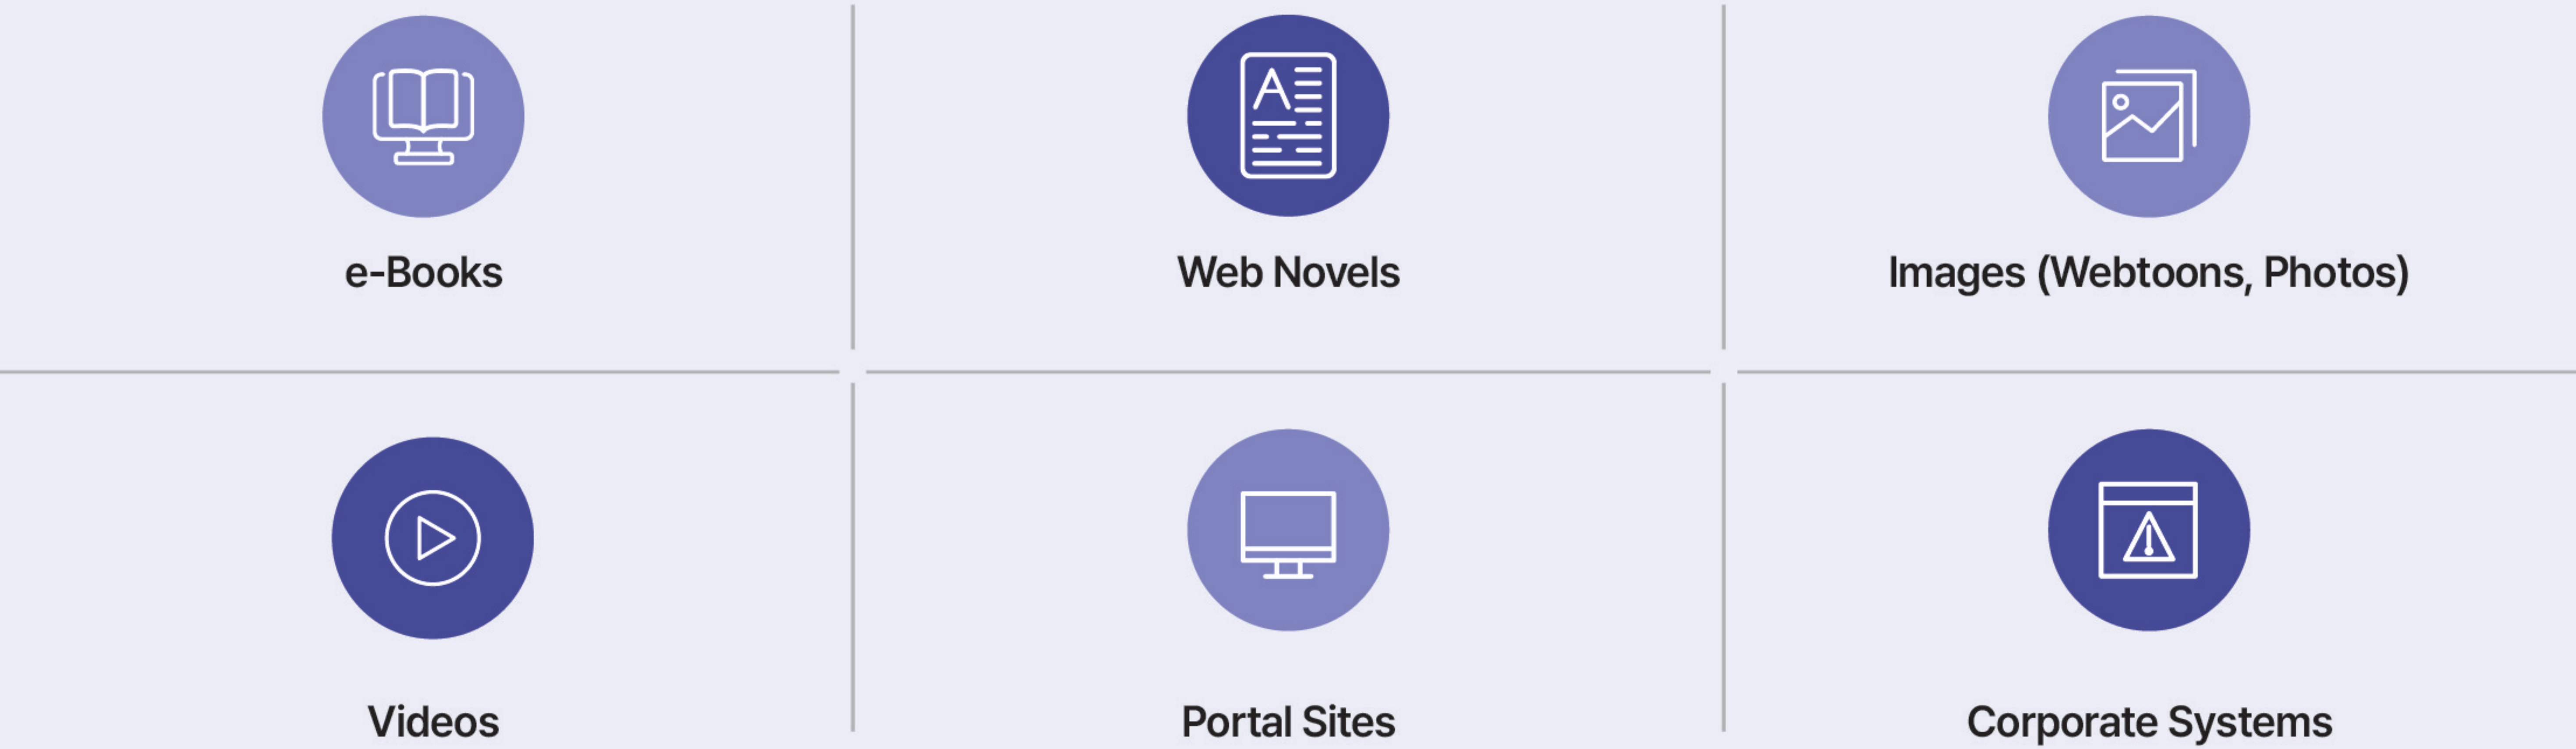

Screen capture control

## Use Cases of Web-X DRM

Web-X DRM can be applied to e-Books, web novels, images (webtoons, photos), audios, videos, information and groupware services

## Key features of Web-X DRM

### Lightweight Security Modules

Web-X DRM does not need any client side installation, whether a plugin, extension, or separate software.

### Powerful Web Security

Web-X DRM prevents the extraction of HTML resources through web scraping and crawling, deters unauthorized distribution via screen captures, and blocks data manipulation using console programs.

### Easy Integration

Web-X DRM eliminates the need for customers to alter their service-side business logic. The Web-X DRM server can easily be positioned between the main host server and the client, similar to a network firewall.

### Persistent Protection of Web Contents

Web-X DRM guards against security breaches in web browsers, whether from recipient's inadvertent or intentional actions.
